

P-NODE 扩散模型: $dz/d\tau = -\alpha \nabla \Phi(z)$

扩散模型 $\Phi = \frac{1}{2} \|z\|^2$
 $\nabla \Phi = z \rightarrow dz/d\tau = -\alpha \cdot z$
Euler 1: $z' = z \cdot (1 - \alpha \Delta t)$
 $\alpha = 0.8, \Delta t = 1.0 \rightarrow z' = z \cdot 0.2$
 $J = (1 - \alpha \Delta t) \cdot I$
 $\det(J) = 0.0400$ (d=2)
k=5: $\det(J)^5 = 0.0000$
